JOB EXPERIENCE

At the moment I have no experience, so I will be happy for any suggestions)

ADDITIONAL INFORMATION

I had a lot of achievements during school, it helped me a lot today. I drew - it was not only a hobby but I also thought that drawing is the main part of the future profession, so at the end of school my choice was between design and architecture. I took part in school, district and regional competitions with many nominations, won prizes, awards, and also attended a specialized art school. After graduating school, I saw more prospects in programming and soon I learned about the frontend - this branch of programming interested me a lot, because it is very creative and had a lot of similar with drawing. Regarding the achievements in programming, I worked on the web application of the food delivery service. A web application created with MERN stack for practice at the university with collaboration, also recently I created an announcement website.
